

Exchange Student Report at Muroran Institute of Technology.

On April 10th, I arrived new Chitose airport around 7.30 am. Firstly, I try to contact to Mr. Arm. Whose Thai student master course at muroran institute of technology. He will take care and pick up me go to muroran institute of technology by bus. Before, I will come to Hokkaido. I search with transportation in Hokkaido. Found that almost bus more comfortable public transportation in Hokkaido because the train doesn't cover every area around Hokkaido. So, the bus can be respond people better then train. On the other hand, train spend time lower then bus. In this exchange program include me and another girl. Who was 3rd years information section. Which surrounding animation and 3D graphic design. She's look chubby and cute girl. Her nickname's Fon.

Around 2 hours, we arrived main gate of muroran institute of technology. After keeping bags into the center for international student room. We had lunch at cafeteria of university. Which's first time for learning rule, traditional and culture Japanese. That's new experiences for me. Although I had come to japan on January for travel at Fukuoga. For first day in muroran. I have problem about Internet because in my apartment hadn't internet. It's important problem because usually I use internet for everything in my lifestyle. For example, contact to my family, search something I want to know and search new knowledge for doing research. We try to inform about SimNet for smartphone. But, we could get through it. "Every cloud has a silver lining" Tonight, we joined welcome party with Thai student in muroran. I was helped and took care by everybody in that party. I got feeling worm welcome from everybody.

The first week in japan, I had to go to city hall with Mr. Endo, who staff of international center, for registration documentary of foreigner. Every week I had 6 subject including Japanese Language A, B and C, Robotic and Cultural Exchange. Furthermore, I had to do research at fluid mechanic design laboratory concerning erosion of material from cavitation. My advisor's Kazama sensai. Who taught and recommended about cavitation, bubble generation, erosion and simulation to me. Therefore, every week I had to send progressive report on Wednesday. It's seminar day of laboratory. My research aims to simulate jet flow direction to specimen inside chamber illustrate with animation by ansys program. Within 6 months, the results from simulation can be demonstrate jet flow through specimen only, so that can't show erosion from cavitation. After subject had finished or vacation, my Japanese language skill had improved, I could talk to my friend in laboratory with Japanese language. Could read Japanese language or kanji alphabet better than after. And got knowledge a lot from every subjects.

Moreover, I had found new foreign friends from another country, example Japan, China, Indonesia, Vietnam, and Nepal etc. from Study Tour by Center for International Student. In this trip including everything concern over Japanese traditional and culture. When finished and arrived at main gate of muroran institute of technology. I think this's amazing experiences and nice friendship. In this trip was included everything about Japanese culture, environment, tradition and foods. So, I think this trip cloud be describe everything about unique of japan.

On September 5th, the first day of trip. In the morning we went to Sapporo Sewrage Science Museum. So,I know about root way water system in the city. It's called Sewerage system. Moreover, improvement and reused water. After We had lunch at Charteraise Gateaux Kingdom Sapporo Hotel. We went to Moereunoma Park. In this place I got amazing memories with my best friends and took picture with everybody. It's very fantastic. In the evening, I enjoyed dinner with my friends. After that, I walked around main area sapporo station. For shopping and taking photos with my friends. The one things, we went to TV tower but we late because where closed at 10.00 p.m. So, we went at 9.50 p.m. but we could take picture with my friends in midnight in front of TV tower. That's ok. And another experiences, it's public bathroom at hotel. Thus, I cloud relax and talked with my friends at public bathroom.

On September 6th, This second days of trip. After finished breakfast, let's go to find new experiences from travels. The first place of today. Hikari Gokin company. where make, research and develop joints and electronic drained water pipes system in the building. So, we can know about process of production form Hikari Gokin company. Therefore, I could bring this knowledge to adjust my projects or works in the future. In afternoon, we went to Otaru Aquarium. where have many animals such as penguin, dolphin, and sea lion. In addition to have dolphin show and sea lion show. Which's nice and interested show for me. In the afternoon, walked shopped and talked photos with my friend at otaru canal. Today dinner's Bar-B-Q buffet at Otaru Unga Shokudo. So, I think cheese cake at otaru very delicious and more famous for dessert. In the midnight, I played card with my friends. Which's more funny.

On September 7th, this's last day of trip. Today I had breakfast so much because the first place's Nikka Whisky Yoichi Distillery. Consequently, we could test another whisky and saw around industry for took picture. Before lunch time, we went to Culture Heritage of Edo Era. Where old wooden house was built by Matsumae-hun. So the lunch's bento. Its traditional Japanese foods. After that, we went to cape Kamui. Where the most beautiful cape in my life. Sea water's clear blue and cloud see into sea.

The finally, Thank you so much Mr.Endo and Mr.Nishihata for supported and looked after thought-out this trip.All the time 6 mouths, I had gone to travel in Hokkaido for example, Furano, Otaru, and Itangi beach. I think in Hokkaido have many beautiful attractions for travel and rest on weekend or holiday.

The finally, I'm very fortunately with I applied exchange program long term at muroran institute of technology because I got new experience and knowledge from this program. Thank you Kazama sensai for advised and taught new knowledge concern with cavitation erosion. Yamachi sensai for taught Japanese language to improved my Japanese language skill. Endo san and staff of center for international student with look after overall. If I have opportunity for apply master course at muroran institute of technology. After when I come back to Thailand, I will contact to international relationship center of Thai-nichi institute of technology concern with the Japanese government student scholarship for graduate and research exchange students.

Mr.Jirayu Samkunta AE 4
